

New ADHD product on horizon in SA

Lamelle Research Laboratories plan to launch a new ADHD supplement using the patented pine bark extract Pycnogel in the third quarter of 2007 (Clinical trial published in the European Journal of Child and Adolescent Psychiatry in 2006). Due to the small dose content of the product, the distribution will be via pharmacies, health shops, allied health care providers and doctors that sell products from their rooms.

The patented pine bark extract has also shown efficacy in the treatment of diabetes, erectile dysfunction and cardiovascular products. Lamelle plan to launch products to treat these disorders with Pycnogenol in 2008.

Lamelle Research Laboratories is a South African biotechnology, research and development company with activity in a diverse range of fields. It uses technology and molecules that are well researched and supported by peer reviewed clinical data.

All enquiries should be directed to medical@lamelle.co.za. For more information about the studies of Pycnogenol's efficacy and safety, contact:

Dr Bradley Wagemaker MBBCh, BSc Med Hons.
